

We wanted to flag an idea on long dated EUR downside. Digital Risk Reversals benefit from the high forwards, along with elevated levels of vols and skew. The following example is a premium neutral trade with observation at expiry.

1.1125 EURUSD spot ref
+485 3y swap points

3y 1.0750 / 1.3175 Digital risk reversal (zero net premium)

Client buys 3y Digital put struck at 1.0750, European observation
Client sells 3y Digital call struck at 1.3175, European observation
Net premium: Zero

We compared this with vanilla risk reversals – for a 3y structure, 1.0750 / 1.2300 vanilla reversal is zero net premium.

Please note the levels below are indications – please reach out for live levels.
