Paul,

the dislocation in EM continues and we'd like to offer the below idea that can be traded in a note format and offers a 17-18% annual net coupon. If you don't like Turkey, but would like to see a similar payout structure in Brazil, Mexico, Rubble or a basket of EM currencies, we can price that up as well.

- this is not principal-protected (client is short an at-expiry knock-in barrier = EKI) but the whole point is that spot, forwards and vol are currently extended and 2 out of 3 (forwards + vol) are likely to come back in the next 12-18 months as political risk in Turkey goes down and inflation dynamics stabilise

- We have set the final autocall super-high (ATMF = at-the-money-forward) so that if client doesn't get autocalled the likelihood of them receiving the snowball coupon is still relatively high

In a note format, the indication we have from WM CRM was that they would give this a 75% LTV.

IN PLAIN ENGLISH, THE CLIENT TAKES ADVANTAGE OF A DISLOCATION IN TURKEY, RECEIVES AN ANNUALIZED COUPON OF 17-18%, AND WHEN USDTRY TRADES BELOW 4.75 ON ANY QUARTERLY OBSERVATION, THE TRADE ENDS. THE RISK TO THE CLIENT IS MODELED IN THE MARK-TO-MARKET ANALYSIS BELOW.

IF USDTRY NEVER FIXES BELOW 4.75 ON ANY QUARTERLY OBSERVATION AND ENDS UP ABOVE 8.90 IN 5 YEARS, THE CLIENT INCURS A SIGNIFICANT LOSS (SEE ANALYSIS BELOW.)

Refs:

USDTRY Spot = 4.75

USDTRY 5y forward = 8.90

Indicative terms:

Format

Autocallable Swap

Tenor

5 years, subject to early autocall

Underlying

USDTRY FX Rate

Observation Dates

Quarterly from Trade Date

Autocall Barrier

ATMS (= initial level as of Trade Date) for first 19 observation dates but
ATMF level for last observation date

Client pays

3m\$LIBOR on a quarterly basis, subject to early autocall

Client receives

$5.20\% \times t$ ($t = 1, 2, \dots, 20$) if USDTRY < Autocall Barrier (and the swap stops)
else 0 on that observation date.

If never autocalled

Then client is short USDTRY EKI Call Option with Strike = ATMS and EKI = ATMF

Scenario Analysis assuming \$10M notional - at yearly intervals* (the analysis is the MtM on the leg the client receives and does not include the 3mLibor payments)

USDTRY Autocallable Swap MtM as of
