

No fed hikes in 1H16, but slow hikes will come eventually

Strong jobs and falling UE despite still slow GDP justifies Fed hikes by Sept. This likely boosts the dollar a bit more, keeps US inflation very low and flattens the yield curve. If a strong dollar and some slow hikes stave off rising unit labor costs, then, given scant long-term real interest rates globally, the FF rate and 10yr yield are likely plateau well below historical norms this cycle. This supports S&P PE upside.
