

2017/11/22

Can you give me an example where Art is way ahead of Science? I love books and movies but Art doesn't do it for me normally. Although I appreciate/admire the Art of the Freemasonry in the building of the Cathedrals. And I adore Da Vinci.

04:15:11 pm

I don't mean art of 300 years ago 😊 . conceptual art . perceptual art . for example, pointillism previews quantum ( packets ) . cubism. previews. relativity.

04:36:30 pm

rothko is a good example of feelings as you describe , given color and form

04:36:58 pm

engagement for robots and emotional connections. feedback loops on new mice

04:37:43 pm

music and harmony now are included in the elegance of coding.

04:38:25 pm

the insights into fundamental reality, consciousness . awareness . are much more philosophical artistic conversations than science. the language of mathematics ie probability when spoken in the ordinary vernacular are extremely misleading. ex. probability of life on other planets. makes no sense mathematically . there is no number that describes things that have only happened once. . but. people like the vocabulary of math, gives them a sense of authority. btw. Im sorry if my responses appear harsh, you will be able to see the accompanying smile on Skype 😊

04:53:53 pm

I like the rigorousness! Not use to it but actually appreciate it a lot. Impressed by your mind (although you must be used to hearing that compliment I suppose). How would you understand pointillism previewed quantum. Did Seurat or Signac imagined quantum physics?

06:01:14 pm

Rothko doesn't foot for me.

07:10:56 pm

Schiele yes

07:11:12 pm

Philosophical yes, artistic less. I am probably extremely simple/basic but I find the art world frivolous (even if I have evolved from being an investment banker to a script writer).

07:13:33 pm

What do you mean by: engagement for robots and emotional connections. feedback loops on new mice?

07:15:31 pm

One odd question, given the choice of anyone in the world (in your case dead, you seem to know all the cool people alive 😊), whom would you want as a dinner guest? Why?

07:20:45 pm

rothko doesn't try to show you something he gives you a canvas on which to paint your own thoughts. like looking at clouds and thinking whatever you like. . quantum only means small packets. . like points of paint. . the science of quantum is non intuitive including being in two places at the same time. . though you can sit in your house and think about the beach. not a perfect analogy, . if given the choice. dead simply means not alive. now or in the past I would like to have dinner with the future me. so i could hear what i should not do. 😊

07:47:11 pm

You wouldn't know what not to do because there are always a gazillion possibilities .... and... don't you think that knowing it would make life today boring....?  
I would never pretend to understand Quantum Physics but your analogy is the best one I have ever heard. Still don't grasp how the laws of physics that work for the rest of the universe do not work when we deal with sub particles. How can there be 2 different set of laws?  
Have to disagree on Rothko 😊 (hope you still want to talk after this confession...) and the art world. But maybe my mind is too simple.  
What is your best quality?

08:03:40 pm

knowing what i dont know

09:01:14 pm

Good answer.  
What don't you know that you would like to know?

10:54:00 pm

the most interesting things i have found have been outside of my unknowing. re quantum wave collapse or schroedinger cat. its easy if i ask you if you want chicken or fish for dinner. the answers are superimposed on one another , both exist at the same time until the decision when the wave function collapses into a choice. . its not that odd, when time is taken in to account

10:56:50 pm

im up at 630 am

11:06:06 pm

Wow! You did just blow my mind! What an amazing analogy! Why have I never read/heard it before?  
Had dinner with an ex tonight, probably my best well-read ex (arts/history wise, not science/math's wise). I must say I loved talking about books and novels/artistic creativity/feelings through the senses...  
Tell me one thing you have found outside of your unknowing

01:04:43 am

plants that have 24 senses and can communicate over long distances with a complex language. yup

01:06:56 am

What are you doing awake?

01:07:17 am

Which plants?

01:07:27 am

better tomorrow

01:07:49 am

Let me google it

01:07:49 am

google plant communication. ted talks . old but worthwhile

01:08:15 am

[REDACTED]

This is like portals...

01:08:48 am

Is there real proof of it?

01:09:00 am

yes , of course. I am not woo woo

01:09:18 am

01:09:23 am

[REDACTED]

Do you believe in portals?

01:09:37 am

I am woo woo.... or maybe not

01:09:54 am

[REDACTED]

I am funding a plant biology experimental group at harvard, and quantum computer build at MIT

01:10:09 am

What will the plant biology group do?

01:10:53 am

[REDACTED]

I went to see the computer last week, , there goes all encryption as we know it , next level is quantum encryption. more like know what women want 😊

01:11:01 am

██████████

And the quantum computer? What answers do you expect

01:11:14 am

?

01:11:16 am

plants get cancer. . plants have an atp cycle. .. plants . communicate. plants have cholesterol. .

01:11:47 am

██████████

We know that quantum encryption will be unbreakable for now. Is that what you want

01:12:10 am

?

01:12:12 am

plants have figured out how to get humans to take care of them

01:12:14 am

██████████

Did not know about plants. You are teaching me....

01:12:28 am

Also pets....

01:12:46 am

That is what makes us human. We take care of things alive

01:13:05 am

out of all the subjects it is the most useful . mushrooms . fungus. aspirin is tree bark, . tamoxifen is tree bark, . .

01:13:16 am

oo

ALL medicine stems from plants. Witches just needed to k le about plants...

01:13:57 am

But the fact they communicate... I did not know

01:14:20 am

oo

✓ Read

not all , , genetic therapy is not related

01:14:22 am
