we can see light , which is only radiation in a very very narrow band, if we could " see " more frequencies we would see all the cellular communication waves around us. would that be reality, NO. because the " reality we " see " is limited to a narrow human sensitive band of information. 😊

11:32:22 am

Deepak

Correct
However the rest of reality - inferred - is the knowing and interpreting of cognitive experience in consciousness also
By giving it names and labels we have constructed a human universe

11:42:49 am

a universe that we know is the universe constructed by human senses and cognition. there like radio waves is an unseen one. and many others constructed by the thing that senses it. YOU ARE RIGHT

11:45:17 am

Deepak

All named forms are phenomena
All phenomena are a collection of intermittent sensations images feelings and thoughts (qualia) arising from and subsiding into formless awareness .
Humans interpret that as mind body universe stars galaxies etc

11:45:34 am

point the qualia is separate from the sensations. it is inherent, in the object. roundness" for ex. it is apart from our interpretation.

11:47:29 am

Deepak

Got your messages
Yes qualia are excitations of consciousness experienced in consciousness .
Interpretation is also in consciousness
There is only consciousness
The construct is in consciousness
Consciousness conceives constructs governs and becomes the human universe
Other species are in the human universe - in the form we experience them
Taking off !
Bye for now
Love
