we should have answer tomorrow on whether or not sandia to main house will work  
note - [REDACTED] currently is saying height of main house pole may need to be 30' vs 20' it currently is  
which may make it visible from the back parking area

Update from Site Visit  
Line of Sight from Sandia Crest to MH was determined by [REDACTED] flashing a signal mirror,  
the conditions where to hazy to determine any other way

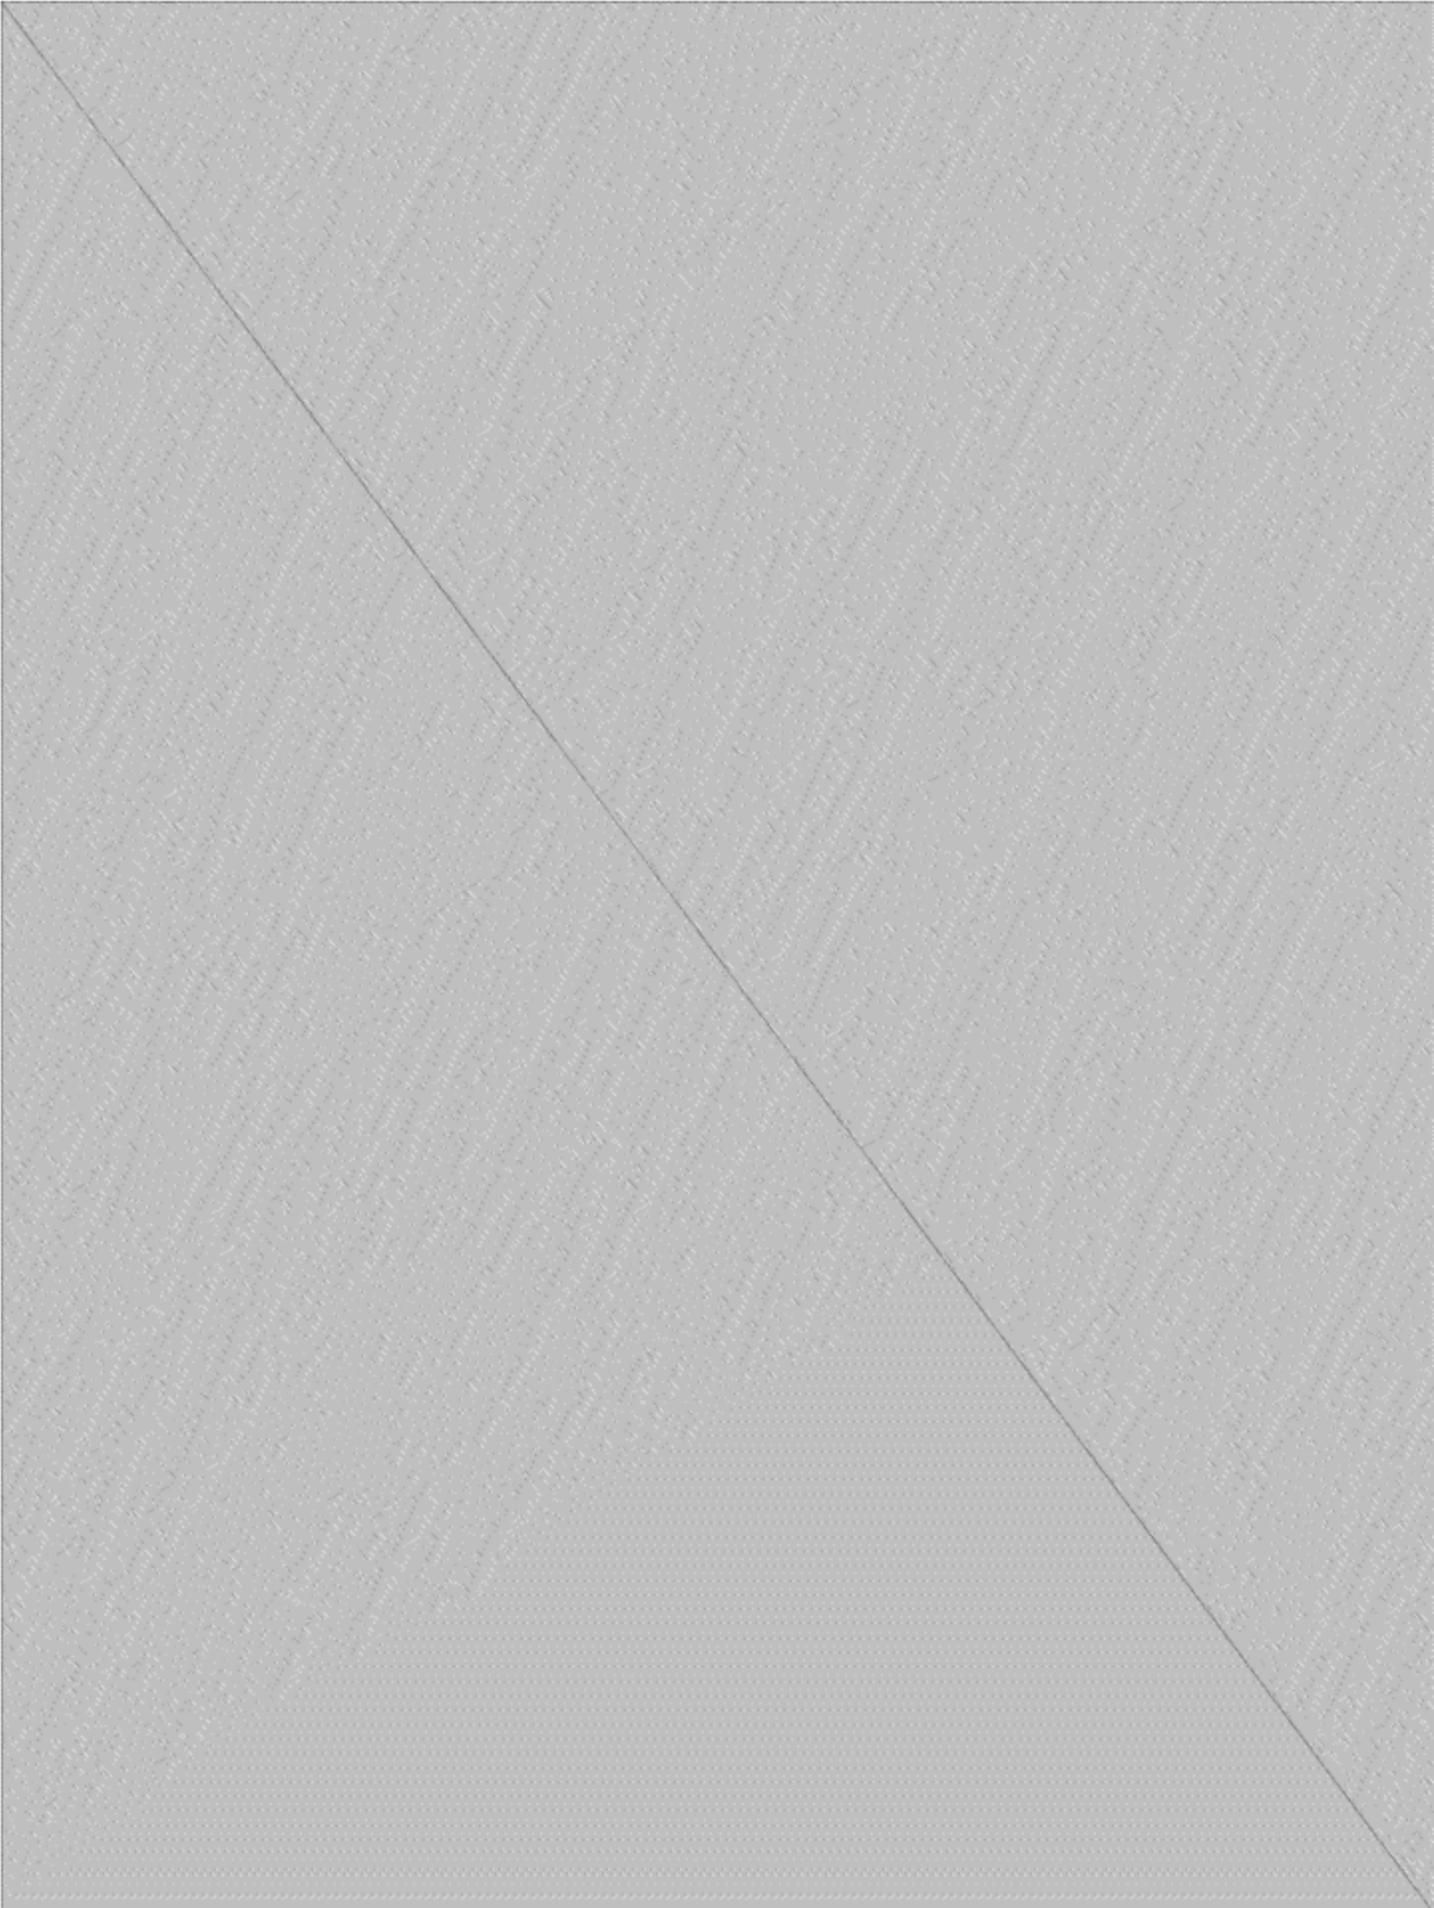

As already stated the Path is very close to the top right of the mountain

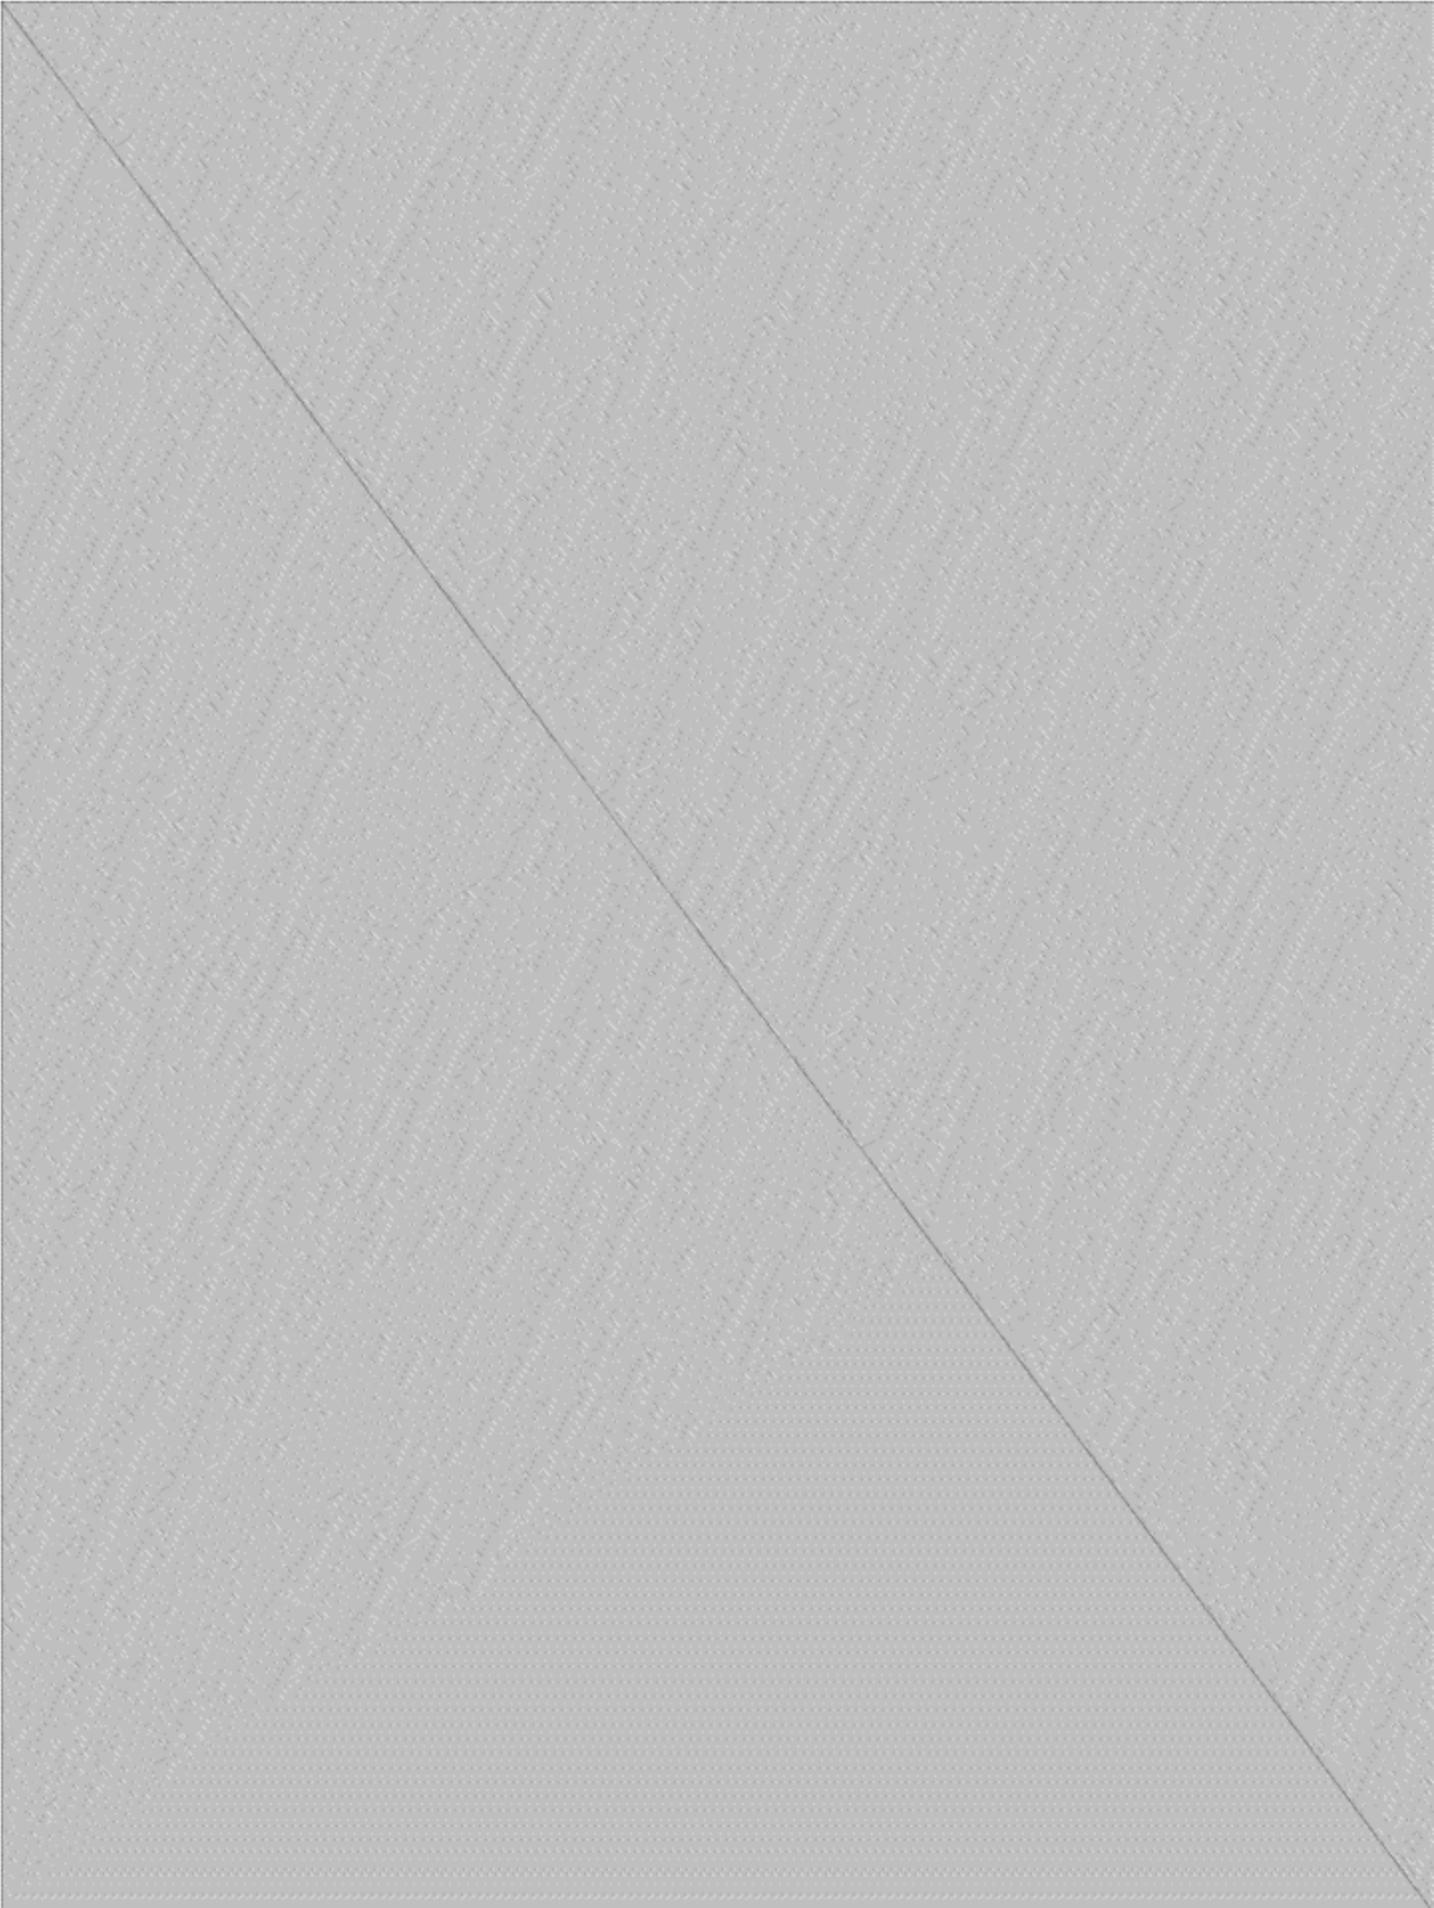

Future Tech recommendation at this time is to place the dish on Sandia tower to 72 ft.  
The 3rd photo of climber Is the approx location of new Dish. The Main house dish  
is to be set at approx 30 ft.  
This will require either a new pole or extending existing pole at Main house . Noting MH  
pole will extend past the apex of the mechanical building roof and will be visible  
from the back parking area. This will need to brought to the Jeffrey's attention  
We should receive Confirmation of which path is most viable by Tuesday next week.  
I have requested that Future Tech contact Sierra Nevada, regarding proposed build out,  
just incase there is an engineering issue with dish size and height on existing tower.

Lastly I have received notice from Centurylink indicating present service provision will  
expire at the end of the month  
I will forward notice separately

Regards
