All true

Do remember DNA cells are part of the reality illusion like the rest of the universe

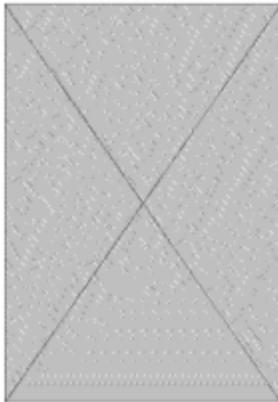

Nantucket went v well

They filmed it and loved it

i think you might postulate that we are always dreaming. freud , during the industrial revolution , thought man as machine, dreams came on like a switch when you fell asleep and off when you woke. . NO dreams are always on, biology wants to stay on machines want to stay off. our consciousness BLOCKS the day dreaming unless you have mental issues, and then you cant tell wheter the voices in your head, are real or only dreams. schizophrenia has sleep issues, , people dream while awake, thats why they seem crazy, everyone would seem crazy if others could see their dreams.

I would make a point if i were you that you ASK QUESTIONS. , many of the answers are still unknown , but you are trying to narrow the questions. . scientists cant complain.

also the story of the bio reaction when one is a child and very anxious, and only hearing its mothers voice on the phone creates a remarkable shift in hormones.

etc. sound waves. nothing more. .. blah blah blah.

with all the work and money for the human dna, we still cant figure out how a single cell divides. we are missing the basic algorithm for life. . when you take out the nucleus, so it has NO dna. and simply tickle the cell , it still divides a couple of times. with no nucleus. that is very odd

GOOD LUCK.
