Since nothing is scheduled yet, let's find a clear weekend that works for everyone.

I can still do the four options below.

If Ed could would miss Feb 22, how about the other three options for everyone.

Jeff and I discussed a potential larger focus for the weekend: planning a build-a-brain project. That of course has many potential meanings, but I like the challenge, and within that deception would be a subsystem to design or emerge. My personal interest would be the physical computational substrate for consciousness.

Neil

Am in SF on the 22nd wrapping up a meeting, but could come over that afternoon and be there for the 23rd.

Ed
