Jeffrey,

Over the last decade luxury car manufacturers recognized that their customers wanted a better driving experience.

Aside from the actual performance of their car, they recognized that the comfort features were a critical component in the buyers decision making.

The level and performance coupled with "cross branding" became a natural evolutionary direction.

Each one of the luxury car makers has teamed up with a well recognized and accomplished high end audio manufacturer to "create" a custom system - exclusive to their brand. These systems are acoustically mapped for a specific vehicle with precision, using specialized sound mapping equipment.

Furthermore, these systems are comprised of many separate speakers strategically positioned for optimal performance values.

Specifically, your new s class Mercedes system is Harman/ Kardon.this system has 15 speakers in a 110 cubic foot space.

The infinity speakers I emailed you are made by Harmon Kardon.
