Eric,  
we'll need an input from Ipad or Iphone from VIP station for audio source to bose unit also, music should be able to be played utilizing all speakers, 5.1 & 2.1 zones to fill cabin. .

tx  
Larry

Good evening Jeffrey,

Please review the attached four (4) page pdf document.

Kindly pay special attention to page 4 (Equipment Block Diagram).

I have spoken with Larry a couple times today and I believe the only real question at this point is whether or not you will ever want to watch a DVD or other means of video on the front monitor?

The way I have illustrated it is such that if you ever decided that you wanted to watch a DVD / Apple TV (photo's, video, etc) on the fwd monitor, you would simply press the video splitter switch in the credenza and then change the input on the TV with the remote control.

If you will only be using the fwd monitor for the cockpit camera and the airshow only, then we do not need the video switcher and you will not need to use the remote to change the inputs on the TV.

I thought this block diagram visual would be a good way to make sure that we are all on the same page.

Please provide some feedback. I will be leaving for vacation on Thursday morning and I would like to provide my guys with a solid direction to keep us moving forward.

Thank you.
