Jeffrey, a colleague of ours has suggested that we contact you and has given us your address.

We are Global Research and Discovery Group LLC, located in Winter Haven FL. GRDG is a private research and development organization that endeavors to be the world's leading think tank and troubleshooting research organization that can outperform government and university institutions by minimizing bureaucracy and maximizing real "on-the ground" problem solving capabilities. We have been working in carbohydrate (sugars and starch) metabolism related to human diseases for over 10 years and have received several patents US and worldwide. Our major discovery is that there is a key triggering mechanism that is the basis for several inflammatory diseases including diabetes, obesity, Alzheimer's Disease, Parkinson's, Huntington's, schizophrenia, Crohn's, and several others. We have learned how to control this mechanism and have recently finished developing a treatment for diabetes and obesity which is now on the market. See <http://www.theledger.com/article/20110316/NEWSCHIEF/103165203/0/SEARCH> We are now focusing on Alzheimer's Disease. See <http://www.foodnavigator-usa.com/R-D/Researchers-see-food-industry-help-to-develop-next-generation-of-brain-foods> Abbott Nutrition has informed us they are standing by for this product to be ready for commercialization, which can be on the market in less than 3 years and will change the lives of millions. Our preliminary testing has reversed the symptoms of AD in our test subjects and we are seeking an investment partner to complete this work, which will take \$8 million over 24-30 months, mostly to be conducted at the University of Utah's Brain Institute, the leading MRI research group in the world.

We hope that you will consider this opportunity. We look forward to your reply.

Thank you, Joe
