**Subject:** 6th floor

Jeffrey,  
here is my explanation of what transpired on 6th floor speaker=20 system, Nick explained the following while Scott was helping trouble=shoot the speaker buzz,.

Nick found the (midrange) Synthesis speakers blown on 6th floor,=Nick informed me the Synthesis speakers have two mid's which are only active wh=n utilizing the Synthesis processor, the other mid's sit dormant when using=20 speakers with normal Dolby 5.1 or 7.2 receiver system, like we are operating now. Nick exchanged the blown Mid's with dormant Midrange speake=s so system would operate normal, Nick was suppose to order new Midrange speakers for the Synthesis,,just to have speakers=in normal condition,.

thank you,  
Larry
