Subject: Re: Proposal for a psi experiment

Who or what asks the questions ?

Who or what is curious about itself ? <=div> How does a physical mechanical object - a 3 =b piece of meat - develop curiosity imagination insight intuition or the d=sire to know itself ?

Worth pondering ?

Who or what ponders ?

Who are we trying to convince ?
Why ?

Good questions. In my case I'm interested in reaching (mostly) younger scientists and scholars who are genuinely skeptical, meaning before their worldview has collapsed into whatever is most expedient for their social or financial security.

Science has just begun to tackle the question of consciousness. The esoteric and mystical traditions have been immersed in it for at least 5,000 years. At this point, based on the preponderance of evidence from psi research, I am inclined to believe that consciousness is indeed fundamental, in some way. Perhaps it's not a fully material idealism, but something along those lines.
