**Subject:** PGP Harvard: Invitation from Genos Beta and \$399 exome sequencing

Dear PGP Harvard participant,

The following is an invitation from a third party activity. While this activity is not conducted by PGP Harvard, we thought you might be interested in learning about it. You are receiving this because:

- \* you are enrolled in the Harvard Personal Genome Project
- \* you do not currently have genome data produced by Harvard PGP

Note: This activity is not reviewed by the Harvard Medical School Institutional Review Board as part of PGP Harvard's study protocol. Third party activities have approval from their own IRB or equivalent when applicable (see information below). You can unsubscribe to all third party activity notifications, by following instructions at the bottom of this email.

Thank you for your ongoing participation!

PGP Harvard

Title: Genos Beta

About:

Genos is a commercial genomics project that aims to revolutionize research by working directly with people who own their genomic data, giving them choices on how its value is utilized.

Genos is inviting Harvard PGP participants to join as some of its first "Beta" members, with a special offer for \$399 exome sequencing for participants that do not yet have their genome sequenced.

If you join, Genos will sequence your exome with 75X coverage (CLIA-certified). Your resulting exome data would become part of the Genos platform and you will control who has access to your data. You'll have access to free tools for exploring your genome. Genos also plans to enable you to share your data with research partners, and give you compensation each time you share your data. Beta members will influence the growth of the Genos platform and be the first to access these planned partnerships.

Your exome data files will also be available to you for download, and you may choose to donate that data to the Harvard PGP, Open Humans, and other projects.

Learn more about Genos Beta and \$399 CLIA exome sequencing: [www.genosresearch.com](http://www.genosresearch.com) <http://www.genosresearch.com>

Genos Beta members will receive the following:

1. \$399 exome sequencing with 75x coverage, CLIA-certified.

2. Free tools to explore your exome, including data visualization and genetic variant information.
3. Access to certified genetic counselors for personalized consultations with preferred rates.
4. (Planned) Compensation for data sharing. Choose to share your genomic information with researchers on a study-by-study basis, and receive compensation through Genos for sharing your data. This feature is planned beginning in Fall 2016.

Joining the Genos platform does not affect your participation in PGP. Genos Beta is not a research study and has no IRB review. Genos is a company founded by Mark Blumling (Chief Executive Officer) and Cliff Reid (Executive Chairman, and former CEO and co-founder of Complete Genomics Inc). You can read more about Genos at their website: [www.genosresearch.com](http://www.genosresearch.com) Please reach out to [info@genosresearch.com](mailto:info@genosresearch.com) with any questions.

P.S. Harvard PGP has about 70 genome data sets that are still in process (not yet released). Please contact Harvard PGP if you want to find out more about your sequencing status.
