Subject: GSJ Internet update

Good Night =oss

I just finished my conference call with Omar of Choice (=Manager) He reports:

When the =chnician that was on site ran diagnostics on the main cable between =hris cottage and the Complex. He found that it compromised in several =pots (a major point was a spot half way up the stairs to the pool in =he old conduit that was inherited from the old owners), and the cable =s no longer holding the integrity of the signal. Their network team is =n St.Croix tomorrow and will not be available to correct the situation. =o:p>

In an effort to be proactive (Only with your =pproval), I proposed that I run separate cable (shallow burial across =ny driveways) along the existing conduit route and match their =ermination protocol on both sides of the cable. I asked if that would =ork to restore communication and internet until their crew can properly =andle the problem. Omar said that it was acceptable if you =pprove.

Regards

JRuan
