Jeff--poetry is a raid on the inarticulate

We have yearnings that are secret deep and hidden from ourselves

Even in the objective reality of physicists 99.9 % of reality is sub empirical and therefore unknowable

Its useful of course-we are in communication right now because of it !</=>

My inner joy however does not depend on it

Every story is a system of thought -including science stories

Reality just is --sometimes it sucks at other times--ecstasy !!

I'm driving soon to LA so may be off computer

poetry allows one to paint their own meaning on similar words.

I would like you consider the following. during the industrial revolution, descriptions of man became mechanical. everyone looking for new mechanisms. ie machine movements. machines need power to run in their natural state they are OFF. default position OFF

people have default ON. each piece trying to stay on.

freud described falling asleep. and dreams turning on. I believe that incorrect. I believe that dreams = the inner workings are ALWAYS on. consciousness gets turn ON when awake and OFF when asleep. . it takes energy to keep up the consciousness screen ON sleep provides the time re charge. . the voices the schizo hears are his own, but his conscious „does=t make the distinction between inside and outside. and is certain others are speaking to him/ the all have sleep disorders. . and keeping a person awake forcefully in prison leads to them repeatedly hearing voices. ( their own inner ?) . I believe that drugs that turn off your consciousness during the day, allow more direct access to inner workings but not useful as they probably cannot be modified. ie you and I eating french fries :)

if you consider consciousness a user interface, between inner working and self. . language becomes the way that inner speaks to self. chomsky now agrees with me.

self aware is tricky, is the computer screen aware of the processor or process behind it? the camera on our skype is it aware of the image? light adjusting screens seems aware of the level of ambient light. .

I've been doing some remarkable experiments. .

Interesting way of putting it Brian. It seems, a bit, to incorporate your ideas about signs being important. It would also seem that it could overlap with Ruth's theory - Ruth also seems to be saying that at any decision point there are a number of possible futures out there and you can choose which one to go to through a process.  
I tend towards the block universe view myself but there's a lot of good discussion to be had here.

You would see past, present and future coming into being together and there would be no problem with causality running both ways.

The future is not here now: what is here now is the process that will lead to the future. Think of it being like a bus with a destination on it: that sign indicates where it will be, but currently it is somewhere else. And by getting on a particular bus we can determine our own future, but we are not there at the moment.

Brian
