Subject:	Zorro Internet

attached are Brice Speed Tests along with =ames overview on how to combine 2 verizon 4g lte business =ccounts

Border Gateway Protocol (BGP) is a =tandardized exterior gateway protocol designed to =xchange routing and reachability information between autonomous systems =AS) on the Internet. The protocol is often classified =s a path vector protocol but is sometimes also =lassed as a distance-vector routing protocol

https://en.wikipedia.org/wiki/Border_Gateway_Protocol
=div class="">

please advise if i should coordinate =ith Brice in finding a local tech expert to configure and help us =ource the proper router hardware thank =ou

Don't call Verizon, they won't be =elpful.

The short =nswer is it theoretically "can" be done, but it's=going to require special router hardware and a configuration expert =han knows more than either Murph or I.

Basically, it has to look at each =nternet request, from each device and decide which internet connection =o send it out on and make sure it uses that same connection for all the =ubsequent requests from that device to that destination. (otherwise any =ecure website — such as gmail or amazon — you log into =ill detect your address changed and log you out).

The tech is called BGP =nd neither of Murph nor I know it well enough to set it up (he and I =ave discussed it for Zorro previously).

In=New Mexico the house wifi should get between 12 - 22 Mbps =own.

It's=using the Verizon LTE internet, which is susceptible to weather (heavy =ain or strong winds).
