The following was set up today

L stairs cd input =s sonos

L Stairs TAPE 1 input is =xpress club 54

the 2 zones you have =re

foyer and =ortable

you have one bridge labeled =itchen

I have removed the ethernet and =ave a wireless connection now to the club54 room both sonos and =irplay

so on a nukum controller you should be =ble to switch from cd and tape 1 vol is set at 50 to control how you =ant to stream your music

I have added an =xpress and tested streaming music from my phone (the duke and trane =ou may have heard earlier) to the speakers (you, your guests =nd staff should be able to do the same once they are on the wi-fi =etwork.)

I have taken the speakers in the av =oom and set up the sonos it is called portable and you can place =t anywhere you want but it is mainly so the operation can be =hecked from the IT/AV ROOM room .

the mac =esktop is now the sonos music server just like =sj

If there is nothing specific you =eed me to do next I would like to go =ome

I have separated my gear from =ours and have a bag now that is yours so no confusion on your gear is =ours

before i leave i will shut this =ystem down if you would like a demo now is the time (by 5pm =
