Boeing in Palm beach now,.  
Aux Boost pumps operate normal in ground,.  
There 2 in fwd aux tank and 2 in rear aux tank,  
In flight we can operate any one pump to tranfer aux fuel, but when selecting both pumps on at same  
time, we get low psi light,  
We are better than before, but still have work,. I'll speak with Neil at Banyan plus Morrison to continued  
trouble shooting,.  
Stambaugh avionics assisted, so banyan should be able to work with quite wing to address our issue in  
depth

Thx  
Larry
