Any chance that one (or both of them) can meet me in Europe after the 20th? I got stuck in Tokyo for 2 more days and I need to be in Milan on the 22nd.

I can meet them anywhere in "Central Europe"/UK. (I can't go to Russia and a couple of other Eastern European countries though)

Hi!

My fr=end Nick Kovarsky, we met with Peter Thiel with the help of you, is going =o be in NY and SF from 14th till 20th of February.

Unfortu=ately I can not come with him.

Is it possib=e to create his meeting with Vincenzo?

2016-02-03 15:18 GMT+03:00 jeffrey =. <jeevacation@gmail.com>:

yes of course

It's hard to tell w/o proper code/documentation (couldn't find much online). In general the four things are:

1) the devil is in the details, meaning that even if in theory it's all solid the implementation might have bugs. There's no definitive technical solution or that though

2) anything that is "custom" (eg: they have a custom wifi protocol) is a red flag because it means that it hasn't been properly vetted and might be broken/buggy

3) there aren't enough details online to tell but it seems to me that to speed up the blockchain verification they partially centralize the network by using their own "supernodes" (essentially the wallets talk to the supernodes vs the actual blockchain). The security of those servers seems key to me and they gloss over it online

4) the mesh network implementation is completely up in the air (judging from what's public) and it could go horribly wrong= So that needs further verification

Also, in general the disadvantage of distributed /open things is that it is a lot easier to steal money vs a closed network (like swift).

<=div>

Are you looking to invest into this thing? If so, I'd suggest a few things:

A) because problem (1) above is not completely solvable, they need to have a plan. Part of it is technical (do continuous code auditing, pentesting, on board proper crypto people, etc), the other part is legal/financial and pr. Specifically they should have some kind of insurance and they should have a pr disaster recovery plan. A big disadvantage of decentralized system is that you don't have anybody to trust and you don't have a closed network that can make stealing money hard, they need to address that

</=iv>

B) realistically nobody is going to attack them until they become significant enough from a financial standpoint. This gives them time to work on A. That said they should avoid making enemies (the "disgruntled hacker type")

Hope this is useful, if you get more stuff from them I'm happy to look into it more. Also if you invest I can help them with (A) if needed.

It's a very dumb platitude but "security is a process" is true.

Unrelated: checkout edge.org <<http://edge.org/>> , I think you'll like it.
There's a short video with Minsky that is absolutely fantastic
