Date: =/b>February 5, 2015 at 4:27:08 PM =ST

To: =/b>Richard Kahn <richardkahn12@gmail.com>

Basically the process is:

1. Start the OLD machine holding =own T until the dancing Thunderbolt or Firewire logos appear.
=/span>

2a. If the OLD machine has a =hunderbolt port (HAS to have the lightning bolt icon above) then use =he
=/span>Thunderbolt cable to link the two machines.

- or -

2b. =/span>If the OLD machine does not have a Thunderbolt port, then plug =ne end of the FireWire cable into
the old machine, and =he other into the FireWire to Thunderbolt adapter, and the =hunderbolt end into
the new machine.

(Both cable =olutions arrived earlier.)

3. Run setup, when asked to migrate existing data, choose from another disk, and select ONLY the home folder from the Documents & Data section. UNCHECK ALL OTHER OPTIONS (Applications, Computer Settings, Other files & folders, etc.)

4. When prompted to log into iCloud use the AppleID that we use iTunes / AppleTV:
jeeitunes@gmail.com | Jenjen12

5. Once the migration completes, log into the new machine with the old machine's account credentials.

6. Install:

Microsoft Office 2011:

<https://www.dropbox.com/s/xvnafvjm4sx1sig/Office%202011%20%2814-3.9%29.pkg?dl=0>

Adobe Flash Player: <http://get.adobe.com/flashplayer>

Firefox: <https://download.mozilla.org/?product=firefox-34.0.5-SSL&s=osx&lang=en-US>

Chrome: <https://dl.google.com/chrome/mac/stable/GGRO/googlechrome.dmg>

Skype: <http://www.skype.com/en/download-skype/skype-for-mac/download>

Spotify: <http://download.spotify.com/Spotify.dmg>

VLC: <http://get.videolan.org/vlc/2.1.5/macosex/vlc-2.1.5.dmg>

7. Run all software updates (Open System Preferences and choose Help > Check for Updates and in the Mac App Store choose the Updates tab).

8. Once you've confirmed the data is on the new machine and working, we can erase the old machine by opening Applications/Utilities/Disk Utility.app.

Select the icon for the old volume underneath the icon that should say "Target Disk Mode" (I'm assuming

the computer is still attached via Target Disk Mode — if not, repeat steps 1 & 2 above) and click Erase. Select Security Options and click the first tick mark on the left to overwrite the drive with a single pass of zeros (this may take a couple hours).

Once it completes, eject the old drive and shut the machine down. It's now ready to be disposed of safely (the next person will have to reinstall the operating system).
