murray gell-mans work. follows :: seems to fit with seans... also for sean its nabokov . "speak memory" ( TIME)

Continuing work with Jim Hartle on understanding how to view quantum mechanics. The usual description is rather silly, and besides it doesn't really allow for quantum cosmology. We have a much better formulation.

Work with two theorists in Vienna on unconventional formulae for entropy. It turns out that the usual expression for entropy or information applies only to certain problems, while other problems require different prescriptions. Basically what is involved is replacing the logarithm by other functions that are also monotonic and concave.
