If I were you I would consider code theory, as a focus.. you will be ahead of the curve rather than reporting on the difficultites of replication.. though in fact . replication can be subsumed in the theory. ie certain strings (proofs), are uni-temporal, they can't be read backwards. and with mutation if the string is long enough, the accuracy of translation(authentic replication) is never 100%. with re exercise -- i am not in doubt

Dear Naysayer,

I was back at my cardio class tonight, not making any excuses... And the only two I missed were last week when I was presenting at a conference in Cambridge and when I had a fever.

So there!

Ps. I think I may use membrane computing in my revamp of scientific computing systems... Still working it out.. thanks for the pointer.
