university initiative=== combine cryptography,, and health,, the brain communicated with the rest of the the body by signals. each cell regulates itself by signals, , each cell communicates with each other by signals. we have begun to read these signals but can't decipher them.. benchley park , broke the nazi enigma code, today's universities in combination with the super computer power of MI 6 , should tackle the de encryption of the body signals.. it would be the biggest breakthrough in health, limiting disease, fighting aging, spread of flu etc.. England should lead the effort.

financial initiative,, there is more than enough goods to keep everyone happy,, it is a shortage of money that is the problem.. computers have replaced many skills , and therefore jobs , unemployment used to be a sign of trouble. they economists fail to realize that a business that fires 1000 workers, by replacing them with one computer, changes the basics of the economy,, we have created silicon based work force, that does not show in the numbers.
