Hello great friend,,,,in Yemen over thirty percent of agricultural land and large part of our water reserves..is planted with the cursed kat plant all the Yemenites including our Yemenites brothers of Jakob,,, we chew almost daily while our brothers only chew Friday night and Saturday,,, I got fascinated with the idea of introducing it

As a juice in Yemen,Arabia,,where kat is not allowed ,Europe ,especially u.k.

.....

In few days will be in Egypt,I will investigate whether our concentrate plant now closed can produce it as concentrate,to be added when consumed with juice like lemon or other,(I E ,like VIMTO ,RED BULL)especially in bar and discos, and for taxi drivers,transport drivers..

The concentrate plant can be in Yemen or Ethiopia,which is also a big producer of kat,,

How can we contact the guy who introduced it in west bank to exchange ideas ..

You will be part of it investing in this part of the world sir

Sincerely. Shaher
