Well Drilling

the only thing at this time that is not included in bid is

800 ft of control wire for well operation
800 ft of wire to power well
800 ft of pipe

the plan is to rest well 4 for a period of time, to test new well.
In doing so we would disconnect well 4 controls and wire in new well controls.
This would cut back on cost of purchasing well controls at this time.
please controls are for on and off operation of well and distribution pumps
Maybe in the future a separate control panel could be installed

Wire and pipe estimates would be rough, pump size is determined after drilling is done
I will estimate for best case scenario for 100 gpm pump

please note new well needs to be operational and tested by jan 15 2013, due to the fact that by Jan 15 2014 we have to prove/use 25% of the 68 afa permitted allotment.
The dates are firm and are part of a settlement agreement with the WRD, NM
If the well is drilled by end of june, this will only leave 3 months at best for testing.

any questions or concerns please advise
