Jeffrey,
The GIV has a good base for cabin audio stereo playback.
They have sub-woofer installed across from rear Divan as depicted in photo attached.
There are 10 speakers located behind the side panel window panels, each speaker located hear level between each cabin window. They used fabric to cover the side panels for music to penetrate. Something to keep in mind for your fabric choice if you elect to install "Is It Leather" as oppose to a fabric material.
I would upgrade the receiver, Amps, subwoofer and speakers, at least all the wiring is in place for an economical approach to good music. We could incooperate an Airplay style automotive receiver or aviation grade receiver with blueray player plus Ipad dock for music source.

The GIV also has XM radio installed as a music source with wireless Seinheiser headphones, nice touch, but I'd imagine there would be interference in the headphones while airborne. In the hanger they appear to work.

Do you want BlueRay player to display movies on fwd monitor?

Thx,
Larry
