Jeffrey,

I flew the Boeing to Brunswick GA today, auto pilot is PERFECT, by repairing the ADC (Air Data Computer) operation on both Capt and co-pilots flight director autopilot function and altitude hold is normal, the GPS issue was corrected with exchange of Symbol Generator.

#3 throttle was lubed and works good, I will have maintenance facility further investigate using Borescope to determine if we need to replace the throttle bearing in pylon which requires engine removal. Overall the plane flew perfect, I was very pleased with the flight and aircrafts performance.

Parking is only \$75 per day in Brunswick if we elect to leave boeing parked after inspection.

Thank you,

Larry
