Subject: simpler ways to start...

Jeff,

Here are some more-affordable ways to help:

- Ben needs one of my RoboKind robots for OpenCog. These cost **$18k** each.

- I can build a gorgeous Gynoid with gestural body and rolling-mobile base, and donate it to the OpenCog/GENI-Lab collaboration, for just **$150k and 6 months**.

  - This will be greatly useful to my work with Ben, and will be a great step toward development of a standard Gynoid platform.

  - Later we can always add a walking android body and transition to manufacturing, if those extra funds become available.

- To set up basic GENI lab space in Hong Kong with Ben will cost about **$85k for a year** of rent, utilities, and to form the non-profit in Hong Kong. This will enable Ben and myself and our teams to collaborate more fully.

If you would fund any of the above, it would help greatly, and be much appreciated.

Kind regards,

David Hanson, Ph.D., Founder/ Chief Scientist, Hanson Robotics Inc. ██████████
