Subject: B727 Mx update

Jeffrey,

Here is my plan for B727 maintenance if you approve?

-I have removed the Captains A.D.C. (Air Data Computer) for repair to address autopilot altitude hold issue.

-I have removed the Symbol Generator for GPS and M.F.D. (Multifunction Function Display) repair.

-lubed the #3 throttle and is acceptable for flight at this time.

-will address fwd airstair sticking issue.

*****both ADC and Symbol Generators have been send out for repair and have a 10 day turn time, best economical approach since we have the down time to accomplish this.**

-February 28th midnight aircraft needs to arrive in Brunswick GA for Fuel tank inspection and A check.

is this approved and acceptable with possible West coast trip later in February ?

thank you,
Larry
