Subject: Re:

if time is a field, causality, and non-local phenomenon take on interesting characteristics, Einstein's space is static though curved, my space is dynamic. Gravity might fall out of the time interaction with matter. Possibly dark energy as well as dark matter also is just a field effect. Measurement would inherently affect the field.

Dear Jeffrey,
I'd love to talk. This weekend or next week is good. This is an intriguing idea. I will think about it. Call any time after 10AM (before I am probably out). [REDACTED]

Seth

P.S. The grant you gave me via MIT is at work supporting some very smart young postdocs. It is making my life much easier because it doesn't have the millions of restrictions imposed by the government.
Thanks!

could we set aside 30 minutes so that you can bring me up to date on your work, phone weekend - next week? ,, question , If time behaved more like a field or force , than merely a metric, . causing an acceleration of space/ .if i had a one dimensional space with two distant objects, applying a force in the second dimension would draw the two objects together. it would look like gravity in the one dimension. same for two/ maybe for three.??? what would the math look like ?
