Subject: You have visitors who show up at 8pm?

O3b has 4 satellites in the sky. Thales built them and made a mistake which has shortened the life of 2 of them to 5 years from 15. This delayed the second launch.

4 more satellites are going up early July on the Soyuz from French Guyana.

4 more are scheduled for the end of the year.

The company is doing well now and valued around 3-4b depending on who you ask.
