Good afternoon,

It was just verified for me that it's ok to go forward the 100ft. I can go left or right 10ft.

The only problem is we can't go lower than the 50ft. The FCC path study gave us 50ft, our tower is 50ft and I'm putting the radio at 47'-48'. Please be advised that moving the tower changes all of our mapped paths on the island also. We will need more bridges making the system weaker with more hops. To eliminate that we would have to put up more links. I would hate to have bandwidth and not be able to get it to where we need it at full capacity. That's one of the ISPs on island biggest problems. Don't want to end up like that. Im doing a new link and bridge test today after I'm finish I will have a better idea as to how many bridges or links we need and there placement if approved.

Regards,
Terrence Rabsatt
