Attached for your reference:

a memo from Casey Cook outlining "Water Supply at Zorro Ranch"
photo from Dakota well showing wire bundle at 50ft

1. Dakota Well

Rogers confirmed that about 500 feet of wire was removed, the remaining wire has become stuck, despite further attempts this could not be retrieved. None of the sounding tube was recovered. Rogers opinion is that any further effort to remove the stuck wire, pipe etc. would be futile and recommends no further action. Casey Cook concur's with their recommendation.

2. The Ranch requires, approx 25 afa per year for existing domestic, irrigation and ranch related use.

The present infrastructure located at Wells 4, B & K is unable to deliver enough water to meet the needs of the Ranch. Well pump size, storage, distribution pumps and piping will all need to addressed to resolve this issue.

3. Well 6 which is located close to Dakota Well has been brought back online to supplement the loss of production from the Dakota Well.

Estimated production levels from Well 6 is around 25 gpm. Casey Cook recommends having the Well cleaned and a pump test performed to confirm production levels

I have concerns regarding sustainability of this Well, but at this time there is no choice but to run it.

Requesting approval to move forward with budgetary estimates for your review:

- 1: Expansion of the existing water distribution system to maximized, production levels and to meet existing demand from Wells, 4,6,B & K
- 2: Cleaning and pump test Well 6
- 3: Prepare a water distribution plan outlining present and possible future development of Wells/Water Distribution to perfect existing water rights.

Can we proceed?

regards Brice
