Subject: Re:

When Kevin (sound trax) was first tuning the system he herd the buzz and started checking items first he removed the inputs (head unit and ATV) buzz was there then he removed the inputs to the amps (buzz stopped) the buzz in my opinion is coming from or inbetween the headphone amp and the volume control module.

We will isolate and identify as we troubleshoot the system.

Jeffrey,

The wire is shielded and was run separated and away from all power sources. The "buzz" comes in from the old equipment. If I disconnect the amps from the old equip the buzz stops instantly
