Subject: 6th floor export opinion

from Bright Home Audio

I grilled them to now end on how we demand our venders to behave and perform for you I am giving my endorsement based on

meeting the owner

watching the tech work on location

reviewing past project reports

and seeing the tech in action

it was impressive ... simple and 1/4 of the cost of crestron my advise is dump that thing now

Morning Scott,

Here is a revised Invoice

Technical opinion :

Existing setup has multiple issues :

1) Electrical circuit needs to be inspected, given the fact 2 AVRs blew within couple of month, there might be some strange spikes or shorts in the electrical feed

Existing Monster Cable power conditioners are not surge protectors and will not protect the equipment in case of electrical spikes - I recommend to replace it with new generation of surge protectors from Surgex

<http://www.surgex.com/pdf/residential/XR115-Brochure-EMAIL.pdf>

2) Crestron - this system is not very stable and requires frequent maintenance

RTI control is user friendly with very solid performance at half a cost

This is latest, just introduced, product

http://www.rticorp.com/files/cutsheet_t2x.pdf

3) Shutters and lights

Shutters control is very simple - contact closure control, we can implement easily

Lights - I could not find a Main Repeater (the brain) of the system, we need to determine what system is used - Lutron Radio Ra 1st generation or Radio Ra2
Difference is in the drivers (older drivers might not work with new control system)

4) BluRay - this system deserves better BluRay - existing entry level Sony will not output best possible HD picture, we suggest to get oppo BluRay - one of the best BluRay manufacture ever.
<http://www.oppodigital.com/blu-ray-bdp-103/>

We are very concerned about the AVRs blowing up.
It might also be caused by short in speaker wiring
Since we will not be able to replace them, we will not take responsibility for the recurring AVR issues

Let me know if you have any question

Thank You

Radek Nesnidal
