Not sure that I understand?

The cup holders are always furthest away from the passenger and the switches are closer to the passenger.

A passenger always has the ability to access the switches with a glass occupying the cup holder.

Jeffrey,

If you are opposed to the switches and cup holders favoring the inboard side, then I propose that we fabricate a bezel plate that would incorporate the switches and the cup holders. After fitting, we will have the bezel metal plated to match the switches.

Attached is a bezel that we had made for the global express arm rest where we incorporated the cup holder and tv arm receptacle into one clean look.

Also attached is a 2 page pdf illustrating the proposed bezel detail for the ledges.
