Brice,

I sent Cliff an email again last night and he should have the quote done by Monday. I am off Monday but will try to get this taken care of so the quote will be ready for Tuesday. This will only be the quote with no formal proposal due to the time line and changes to move the endpoint back to Sandia Crest. Richard Kahn called and wants to talk. The most important item is the FCC Licensing process which should be considered as soon as possible. At this point you will be lucky to make the Sandia Crest side happen before snowfall. Any delays with the licensing or discussions will push this into midwinter. You still need a tower and that has to be specified for the appropriate tower hardware needed to mount the antenna. I will run the link again to see if you can get away with a 30 foot tower to bring the budget down some but the steel is the least expensive part of the tower portion of the project. I will call Richard if this is needed today but it would be best to discuss the project on Tuesday if he is looking for additional numbers. I will send you a separate quote for the FCC process today if I can stay out of meetings. I will want to have a discussion to make sure that everyone is on the same page for the offer. I will have to provide you with a detail of the proposal offer for the project. The FCC licensing is pretty straight forward and we will cover this in the Tuesday conversation. Please let me know what time will work for the call and if you would like to have anyone else from ACE on the call.

Thanks,

Richard L. Boltz

Looks like we are going know with this
Do I need to speak to your management

Brice,

Really sorry but I had to go to the Big guy for the tower services on Sandia and it is in his to do list for quotes. He owns the business so I can only keep asking when. I have the pricing for the rest just not the Crest.

Thanks,

hi there
Have discussed with Jeffrey, link plan etc, do you have anything else to forward to him
regards Brice

Brice,

I have the new BOM data back just now and am reviewing against the engineering design tool data. I will need to work on this tonight and come up with the Sandia Crest side labor for ATS. Even a budgetary quote takes a lot of work to get everything verified. One mistake can be quite costly.

Thanks,
