Thanks for the brief but captivating sushi . The mathematical modelling book is really great .
I sat up until 3 am. thoughts .- 1 In your appendix on Graphical and Mathematical software,
why not think of " life," as the simulation running the bio- program. why not , because the
algorithms , time series. approximations and non linear equations are all based in mathematics.
? I postulate that mathematics represents a desire for a single truth, asymptotically perhaps but
ideally, a real truth, , Biology is based on - non-truth, deception, deceit, obfuscation ,
misinformation. NO , i am not nuts . -
grabbing and making use of the others (prey) free- energy , is an essential biological (i can;t
discount purely physical systems but thats for a dinner conversation,). imperative. needed and
used as a method of survival. for the agent to protect itself it needs Alice and Bob like behavior
and all its permutations. . protection from viruses , it might engage the same methods . add
junk, encrypt, have third party verification. etc.

Unfortunately computers don't lie they merely generate some errors. I want build a computer
that will lie to me. (a female turing machine)
