I know it. replication for cells is too expensive to explain evolution. it is the replication of signals and their mutations that makes the game theoretical approach useful.

FYI, an additional anniversary in cryptography in 2011:
The renaissance polymath Leon Battista Alberti is often thought of as one of the "father of cryptography" in the West.

His text on cryptography, *De componendis Cifris*, was published in 1466.

Hence 2011 will be the 550th anniversary.

{The history of the text was written by the cryptography bibliographer of the University of Pennsylvania, Charles J. Mendelson, in a 1947 article in *Isis* (**Mendelsohn** Ch. J. Bibliographical Note on the "**De Cifris**" of LeoneBattista Alberti// *Isis*.-1947.-N. 32.-P. 48-51.)}
