Jeffrey,

I really need to review Nick's pricing on his equipment, I understand he needs to make money on project, however we should get good pricing on equipment also.

quick search on Internet price of the outdoor speakers (Nick's price \$450.00) I found for \$345.00

I was surprised when he told me yesterday that he forwarded you new pricing, and didn't copy me on the email.

\$345 [online](#)

The Electro-Voice ZX1i is the new standard of no compromise audio performance and versatility in an easy to install, compact sound reinforcement package. The enclosure geometry has been engineered to provide maximum rigidity and acoustic performance. The velocity compensated port design overcomes the limitation of many small cabinet loudspeakers and enables exceptional low-frequency response without vent noise. ZX1i installation is incredibly simple with the included QuickSAM mounting system. The QuickSAM system is a unique, integrated mounting bracket which is virtually foolproof. It allows the installer to simply snap the speaker onto the bracket, then tighten it to the desired position. For array mounting, there is an optional array bracket kit available which allows multiple units to be mounted together for a variety of configurations. All Zx1i "t" versions use a special circuit that, when in transformer mode, re-configures the network to a current actuated Hi-Pass filter at the transformer primary. It gently rolls off the lowest frequencies to maintain a safe load on the amplifier without affecting the higher (vocal) frequencies and the program continues without interruption. Low frequency current is limited through the transformer eliminating low frequency saturation. Automatic Saturation Compensation allows many speakers to be run on a distributed line with a 50Hz Hi-Pass filter before the amplifier, regardless of the number of speakers on the same line (the number of tapped watts cannot exceed the amplifier rating). With the same 50Hz Hi-Pass, 10 speakers on transformers will have the same full sound as a single speaker at 8 ohms. Speakers sold individually. « less... more »

Hello Jeffery,  
Attached is the proposal with the 2D projector and other changes.  
Upon acceptance of proposal and deposit I can order everything and have it all in  
about 3 weeks! So if you give me the Approval I can have LSJ done before  
Christmas maybe New York also or at least right after holidays

The Titan will be the longest to get right around 3 weeks. They said best to order at  
beginning of the month for quickest delivery.
