Subject: New Well

FYI

Casey Cook has recommended that the new well is acid washed before we do pumping test this will help clean out the drillers mud from water producing fractures allowing for better productivity

I have scheduled this for today, the well will need to rest over the weekend, pumping test early next week

please note water from wells 4 and b is still cloudy from drillers mud

During the pumping test water levels in 4 and b will be monitored to determine draw down effects from new well.

This critical information in determining pump size and pumping schedules
