Dear Dr. Hauser,

As you might recall, I emailed you some months ago concerning my research for a book about the allegations of misconduct in your lab, suggesting that we might talk. You indicated at the time that until the process is complete, you were unable to speak. I'm writing now in the hope that you might feel more at ease with talking to me. I'm aware that NIH has not completed their inquiries, but perhaps you are at liberty to discuss your situation more freely, being no longer at Harvard. Please let me know what you think. I very much look forward to having the opportunity to talk with you.

Best regards,
Siri

Dear Siri

Thanks for your message. Until the process is complete, I am afraid there is nothing to say.

Sincerely,

Dear Dr. Hauser,

My name is Siri Carpenter. I'm a freelance science journalist and a social psychologist by training (I did my Ph.D. with Mahzarin Banaji when she was at Yale). I'm doing background research for a book about the events surrounding allegations of misconduct in your lab, and am hoping you will agree to talk with me. I'd like to emphasize that this project is a long-term proposition for me, since the federal investigations are still ongoing. My aim is not to sensationalize or to break news, but to develop as complete and nuanced a picture as possible of how this episode unfolded, its effects on you and your field, and the broader scientific complexities that your story might help elucidate. I'm committed to writing a fair and thorough account of what happened, and I believe that as a psychologist who understands the research and the culture of science, I will be able to produce a story with the depth and accuracy that the subject deserves. I'd be grateful if you can help me get the story right. Can we talk?

Best regards,
Siri
