**Subject:** 5 palms

I talked to Paul (enr.) Tom and Bill on the 14' high 5 palms  
it will require poured in place walls, block can't stack that high.  
Paul is calculating the structure and foundation with a 22' wide 8' high doors and a 3' transom (11' total height.)

I assume the shutters are out?

14' seems to us the right height for the 16x32 building. I assume you are trying to use the big bookcase and  
eliminate one of the end 8' doors  
Which end does the bookcase go on  
    East?  
    West?  
add a 3' access door some place?

did you find plans for the bookcase ?if not should we try and figure out what you have and make sure it fits 5  
palms
