Title: Software Hi Jeffrey,

You look well, happy you are in Paris enjoying yourself!

The idea behind the software is that you reduce costs by giving your house managers the tool that allows them to manage expenses better. Your CPA is happy because he gets information he needs from staff without complicated excel and human error. And as an owner, you have an option to review relevant reports (that staff can print for you or you can access in software). So in 15 minutes a month you will know what and where has been spent.

Here is a one minute demo <http://www.estateintelligence.com/Demo/>

I have 2 "paying" clients now: JP using it for all his homes and a British client with 2 islands and a yacht. Their staff uses it most and they both only review reports.

Would very much like to know what you think.

Thank you!!!
Dasha
