More important to get more air movement

Sorry for all the typos .Sent from my iPhone

Mr. Epstein, during the Siemens SCU panel up grade the installation technician found your Bed room AC/unit controller not compatible with the new ethernet system. When Siemens priced the job they did not give a price to upgrade that controller, they didn't realize the MEC controller on the unit would not run on the ethernet system. `Attached is a proposal for \$6863.00 to change the MEC control panel to run on the ethernet system. Richard.
