Dear Dr. Tess,

Thank you for your clarification. Please see the edited press release and let me know if it is okay
for me to send out. I will send you some of the press links when published.

my best regards,

The goal is not to improve vigilance or early surgery but to detect those who, AFTER surgery, are at higher risk for metastases. If we could develop a diagnostic test based on our research findings, it could be used to stratify patients based on the risk of metastasis.

Dear Dr. Ting,

I hope all is well. Please find attached a press release draft. The purpose of the press is to not only describe your work but to promote Jeffrey's foundation (hence the title heading and blurb on Jeffrey etc).

I understand that the goal of your research is to identify those at higher risk for metastasis-- but could you clarify what the goal of identification is? Is it to improve vigilance and early surgery? Is it also to develop a systemic approach to remedy the biomarkers evident in the environment?

I have highlighted the research's goals in yellow and hope that you can clarify this for me.

I look forward to your adjustments and any edits you see fit.
My best regards,
