i don't think so. , i would like to know how it behaves when disconnected.. if it is only telemetry , all things should go dead,. if it is fact calculating and inhibiting locally,, no need for telemetry alone. I think it is brain , I am surprised that we only have one brain,, it makes little sense where everything should be redundant , degenerative. it would explain coma behavior. . main brain down, etc. i would like to see vns applied to coma patients.
