Why I hate gates

Can't launch my cs high school because of common core standrds he is behind

No innovation allowed

**Subject:** Re: Kentucky

Vermont had potential because they don't require seat time for credits and the standards are currently so vague, particularly in math, but they are transitioning to common core standards for math and literacy in 2013.

they are worse

On Jul 19, 2012, at 11:27 AM, Christina Riley wrote:

They are pretty awful. They are broken down under the usual headings with detailed, specific descriptors for each:

- number and quantity
- algebra
- functions
- modeling
- geometry
- statistics and probability

I'm yet to find a state that doesn't require alignment to standards or that has better standards (I check them all as I go through) - the ones that look

promising are moving to the Common Core standards sometime in the next couple of years and they don't seem to be any better. Still looking.

standards? those are usually awful

find out what they are

On Jul 19, 2012, at 10:59 AM, Christina Riley wrote:

> Like Michigan, Kentucky doesn't require time on seats. They have more credits to achieve than Michigan, but the credits can be gained through proof of achievement of standards rather than tests or 120 hours per year studying a subject. They don't have the speciality schools or career/tech clauses that Michigan have.
