Subject: You have 1 new Relative Finder introduction

Dear sam epstein,

We've got great news! This past week, you've received a new Relative Finder invitation to explore your shared family connections. If you accept, you can join forces to fill in gaps in your family tree. For example, by comparing family surnames and locations, you might discover where your ancestors' paths crossed.

Please accept or decline your invitation by clicking "View Introduction" below. Your identity won't be revealed unless you accept, and your medical information will never be shared.

Who's Invited You:

Alina Novak, a predicted Distant Cousin

You may share an ancestor born as recently as 300 years ago.

Fill in your family tree.

23andMe's Relative Finder identifies undiscovered family members by searching for shared DNA. Members can anonymously contact their relatives to extend their family trees, and learn about shared ancestors.
